

Case Study

Docker Challenge:

Build an api app using Docker compose and share the Dockerfile and screenshots. (Flask app – preferred)

Kubernetes Challenges:

A Company wants to use micro services for their online services. When they approached as an Cloud Architect you are responsible to provide POC and ensure all their questions are answered.

They have few questions those are:

1. We had difficulty in scaling and adapting to the growing online audience.
2. We wanted to build and deliver content primarily over the web.
3. Also we want to upgrade a version. But the release wasn't verified an environment which matches Production. So expect roll back of release.
4. We need to build an stateful apps using this new infrastructure.

Share your results:

1. Pods
2. RC/RS
3. Volumes
4. Deployment
5. Web output

Two page document:

1. Approach and Result.
2. get -o wide /-o json | output
